TECHNICAL EDUCATION.

Drawing forms part of the syllabus of both the Central and the Elementary Schools of Malta and Gozo, and with very few exceptions, in all the boys' elementary schools in Malta, with the standard above the third. Handwork is taught in all the Girls' Schools and in some of the Boys' Schools.

There is also a Night School of Drawing at Notabile.

In April, 1932, a Technical School was started at Imriehel; another is being built at Corradino. Woodwork, Metalwork and Tailoring are taught therein, besides Science, Drawing and the usual literary subjects. Handicraft is being extended throughout the schools including Gozo.

There are also Housecraft Schools for girls at Floriana and in Gozo besides the Hand Work School at the Auberge de France, where pupils attend in turns. To these schools are attached classes in Needlework and Cookery. Marine and Electrical Engineering Classes are held at the Engineering Training Workshop. Apprentices attend at the Engineering Training workshop at Hamrun for workshop training and experience and some also at H.M. Dockyard. Besides there is diving instruction (open also to the public) begining in the ten foot pond at the Engineering Training Workshop and then in the Harbour down to 13 fathoms. Carpentry, shoemaking, stone-cutting and trimming, motor mechanics and driving, cooking, white and colour washing, painting and stencilling, cement paving and hair-cutting are taught at the Salvatore Reformatory. There are also private Trade Schools in Malta, viz: the Salesian Industrial School, the Istituto Vincenzo Bugeja, the Casa di S. Giuseppe or Istituto Bonnici and the Society of Arts, Manufactures and Commerce, the first three of which are subsidized by the Government.

There is also a School of Art which comprises free courses in higher art education. It embraces painting, drawing, modelling, history of art and general art knowledge, engraving, etching and silversmithing.

General information regarding the industry and the possibilities of its development.

The exploitation of deep sea fishing grounds has developed materially since larger craft and motor power were introduced. The application of modern methods of fishing with the "Lampara" and similar implements have given satisfactory results with an increase in the supply of fish.

Steps have been taken for the improvement of the wholesale and retail markets and it is anticipated that this will promote a better distribution of fish.

A new wholesale Fish-market built at Barriera wharf, was inaugurated on the 3rd December, 1937.

NOTE. 64 rotoli = 1 cwt.

7. SUMMARY OF INDUSTRIAL DEVELOPMENT.

The 1936-37 rainy season was short, like that of 1935-36, and most of the rain again fell in November and December instead of being spread over the October-March period. In addition, the rainfall for the season was below average, only totalling 17.1 inches, as compared with an average of about 21 inches during the preceding 14 years. This small seasonal rainfall, following the low rainfall in 1935-36 when only some 13 inches fell, has resulted in a serious shortage of water in the islands and steps have been taken by Government to augment the supply. The fact that the rainy season proper began about a month later than usual resulted in a late germination of autumn sown crops, but, despite the shortage of rainfall, particularly in the spring months, the agricultural year in general was better than the two previous years and may be described as generally satisfactory. Full particulars of the acreages and yields of the various crops are given in Table 1, and it is seen that there was no significant change in the different acreages planted: the yields of the different crops varied considerably according to their reaction to the dry spring conditions and to the general shortage of winter rainfall. Briefly, as regards the principal crops, cereals, beans, vetches and vegetables benefited by the heavy November-December rains followed by the warm spring and gave average or over-average yields: whilst the winter potato crop was late and small, being cut off by a frost in mid-January before it had matured, the spring potato crop was over-average: the onion and cumin seed yields were fair but were somewhat below average owing to the scarsity of late rains: forages and grapes were the most unsatisfactory crops, the forages suffered from the early season drought and the vines also gave poor yields since, following the second successive dry winter, inadequate subsoil moisture was available for growth during the late spring and summer. Potato exports in 1937 totalled some 13,700 tons with a value of about £116,400, these figures, both as regards quantity and value, being higher than in any of the previous four years, the average annual potato exports in the 1933-36 period being 10,800 tons with a value of £97,800. As regards onion exports, some 48,000 cwts: were shipped in 1937 with a value of around £12,000: from 1933-35 the annual exports only averaged some 22,000 cwts: with a value of around £3,300 but with the introduction of export grading regulations in 1936 the demand was improved and 46,440 cwts: were exported with a value of £11,599: the better results obtained with onions in 1936 encouraged the planting of a larger acreage and as a result, despite lower yields, the exports in 1937 equalled the 1936 figures. Of the potato exports, only about 2,000 tons were from the winter crop, the balance being from the spring crop: the winter crop exports were made principally to Belgium and Colombo, the Dutch demand being negligible: of the spring crop exports, both Holland and the United Kingdom imported about 5,000 tons and Belgium also imported a fair quantity: the Dutch market spring crop consumption was only average, and with the over-average crop a fair quantity of yellow flesh potatoes were not shipped: on the other hand the imports by the United Kingdom showed a considerable increase since recent annual exports to the United Kingdom had not exceeded some 1,400 tons. Some 80% of the onion exports were made to the United Kingdom, as compared with United Kingdom imports of some 43% in 1936 and about 11% prior to 1936: Holland and Scandinavia took the balance of the 1937 exports. Cumin seed exports in 1937 totalled some, 4,300 cwts: with a value of about £7,600 these figures being approximately the same as those of 1936 but smaller than the corresponding figures in 1934 and 1935, when heavier yields were obtained and annual exports totalled around 5,000 cwts: with a value of about £11,000. There are a number of small industries which cater principally for the local market. The tomato canning industry, operated principally for paste manufacture, is expanding and now supplies about half of the local market requirements: prior to 1937 there were only three tomato canning factories but during the year two new factories commenced operation, one in Malta and the other in Gozo. The lace industry is of vital importance to the people of Gozo even more than to the Maltese and the Government contemplate launching in the near future a scheme by which cotton and linen thread lace will be examined and labelled. The weaving industry continues to flourish on a small scale as the homespun hand-woven material has a quality of its own which no machine can ever hope to achieve. The brewing industry supplies most of the local demand and export is increasing, exports during the first three quarters of 1937 totalling £13,022 as against a total of £12,900 in 1936. During the same period in 1937 the button exports were valued at £11,946 as against £5,134 in 1936. The export of pipes (smoking requisites) has been maintained, the value of exports up to the end of September being £10,781 as compared with £12,927 in 1936. Exports of stone also increased (£2,317 in 1936, £2,747 in the first three quarters of 1937), and there was a considerable increase in the value of the exports of hides, skins and animal by-products and also in the value of the scrap metal exports, these exports totalling some £28,000 and £20,000 respectively in the first three quarters of 1937. The tourist industry as regards the calls made by cruising steamers was maintained at about the same level which may be considered to be satisfactory in view of the unsettled conditions prevailing in the Mediterranean: with the completion of a large modern hotel, which is now in course of construction, further development of the tourist industry is anticipated.

RETURNS OF GAOLS, &c.—*(continued).*

Questions.	*Answers.*
I. If the prison is on a separate system, is the separation complete? And, if not, what is the separation enforced by day and night respectively?	CORRADINO PRISON: The Prison is on the mixed cellular system as regards the Criminal Ward. The separation is complete as regards prisoners undergoing hard labour of the first class for the first 14 days. After this period prisoners are employed on hard labour of the first class in association as far as practicable. VALLETTA LOCK-UP: It is on a separate system and no effectual separation can, as a rule, be enforced either by night or by day, owing to the fact that the premises are defective and ill suited for the object for which they are intended, viz: 1. The temporary detention of persons sentenced during the day, until their removal to the Corradino Prison in the afternoon. 2. The temporary detention of persons apprehended in the evening or by night until the next conveyance to the Corradino Prison. 3. The temporary detention of prisoners escorted from the Corradino Prison early in the morning to undergo trial before the Magistrate, or before His Majesty's Criminal Court to communicate with their legal adviser when their defence is taken up by the Advocate for the Poor. 4. The detention of Prisoners sentenced to not more than three days. GOZO PRISON: It is not on a separate system, but the premises admit, generally, of the separation of persons sentenced to imprisonment from others who are under examination or remitted for trial.
II. If not on the separate system, what provision is there for the supervision of the prisoners while in association?	CORRADINO PRISON: The Prisoners, while in association, are supervised by warders in the male division, and by Sisters of Charity and wardresses in the female ward. VALLETTA LOCK-UP: They are occasionally supervised, day and night, by the Keeper and by the Inspector and Sergeants of Police on duty at the Main Station. GOZO PRISON: They are supervised by the Warders and occasionally by the Principal Warder of the Prison.
III. How many cells are there; and how many associated wards?	CORRADINO PRISON: There are 264 separate cells and 8 wards. VALLETTA LOCK-UP: There are 8 cells now in use; all the others are damp dark, and insanitary. GOZO PRISON: There are 1 cell and 4 wards, 3 of which wards have airing yards.

RETURNS OF GAOLS, &c.—*(continued).*

Questions.	*Answers.*
IV. Taking the *average* number of prisoners in gaol, how many cubic feet of space are there for each prisoner during the hours of sleep?	CORRADINO PRISON: In the Criminal wards there are 1,120 cubic feet of space for each prisoner in 78 cells and 1,260 cubic feet in 186 cells.
And what superficial area?	The superficial area of each cell is 103·3 sq. ft.
	VALLETTA LOCK-UP: See Answer to Question No. I.
	GOZO PRISON: The cells and yards being very spacious, and the number of persons detained in the same limited, no possible doubt can be entertained of the prisoners being too closely confined.
V. How are the prisoners classified?	CORRADINO PRISON: Long sentence prisoners are subdivided into three grades, viz:— lower, middle, and upper—six months good conduct being required before passing to the middle grade, and three months to the upper grade. First offenders are likewise promoted to a Star Class on attaining the Upper Grade if their conduct during the first 9 months of imprisonment has been exemplary. Recidivists are promoted to the Special class if their conduct during the first 2 years of imprisonment has been exemplary. Such promotion entitles the prisoner to certain privileges.
	VALLETTA LOCK-UP: A classification is not practicable.
	GOZO PRISON: See Answer to Question No. I.
VI. Is penal labour—that is, labour by treadmill, crank, or shot drill—in force?	FOR ALL PRISONS: No penal labour is in force.
VII. If so, during what periods of imprisonments, in respect of what classes of prisoners, and during how many hours, is such penal labour enforced? In stating hours of treadwheel labour, give, first, the total time on and off at the wheel, &c.; secondly, the length of spells and intervals of rest.	FOR ALL PRISONS: See Answer to Question No. VI.
VIII. What kind of labour, other than penal labour, is in use?	CORRADINO PRISON: Building, stone-cutting, carpentering, glazing, mining, painting, staining, whitewashing, tailoring, shoe-making, mat and broom making, gardening, field labour, washing, sewing, knitting, patching, book-binding, oakum picking, cooking, baking, hair-dressing, wicker work and basket making.
	VALLETTA LOCK-UP: Sweeping and washing the Police dormitory, Valletta Lock-up cells and occasionally Police Offices.
	GOZO PRISON: Sweeping and cleaning the prison and environs and conveying water to the same and oakum picking. Also painting and colour washing of premises.

QUESTION III—cont.

FOR ALL HOSPITALS:—

(I.) In reference to the above Table, state whether or not the Register Books were produced on every occasion; and, if not, on how many occasions they were not so produced.

Always kept ready for inspection.

(II.) And if on any occasion when they were examined they were found not to be properly made up to date of examination.

Always found made up to date.

(III). State also how many reports of the following kinds have come under the notice of the Governor:—

(a) Reports of a Financial or Statistical kind, especially such as show the system on which Money and Store Accounts are kept and audited.

(b) Reports by persons charged with the immediate management of the Hospital.

(c) Reports by a Government Inspector, independent of the Governing Authority of the Hospital.

(Append copies of his Reports, if any.)

The queries do not apply to Malta as all Government Hospitals and Asylums are under the management of the Chief Government Medical Officer and the Commissioner for Gozo who correspond with the Lieutenant-Governor as often as is necessary, on all questions of organization, discipline, and finance; and furnish an annual report on the working of the Department.

1937.

Main features of the weather experienced during the Year.

The highest temperature at the Valletta Station was 96.1° F. on the 28th July.

On the 28th July, at Lija, a maximum temperature of 103.4° F. was registered.

The reading of the black bulb thermometer in vacuo, gave the highest reading on the 12th and 28th July when a temperature of 151° was recorded.

The mean maximum temperature at the Valletta Station, for the months of June, July and August was 83.0° F.

The mean minimum temperature at the same Station for the months of January and February was 52.1°F.

The lowest temperature recorded at Valletta was 44.2° F. on the 30th December. On the 6th December at Mdina, a temperature of 32.5° was registered.

During the months of January and February, the average duration of bright sunshine was 6.12 hours. The number of days on which no bright sunshine was registered in the abovemen- tioned months, was 8. During the summer months of June, July and August, the duration of sunshine averaged 11.44 hours per diem.

The mean rainfall over the Islands of Malta and Gozo for the period of January-December and as desumed from the Pluviometer readings at the Government Elementary Schools, was 17.35 inches for Malta and 13.18 for Gozo. The number of days during which rain fell was 75 against 80 in the previous year. No rain fell during the months of June and July. The mean rainfall as deduced from the latest observations equals 21.7 inches.

The rainfall over the Islet of Kemmuna was 7.98 inches.

The prevailing winds, as usual, were the westerly ones; the N.W. heading the list with 126 days. The S.W. and S.E. winds follow next with 50 and 41 days each. The E. winds were the least frequent of all.

The relative humidity at the Valletta Station varied from a maximum of 94% on the 4th May and a minimum of 48% on the 11th June. The mean relative humidity for the year equals 80%.

During the year 8 earthquake shocks were registered.

Fine desert sand was deposited in great quantities on the 13th and 14th May, during a sand storm passing over the island lasting for three days. Over 700 tons were deposited during the year.

On the 26th November a gale of abnormal intensity was registered, the Anemobiagraph registering 66 miles per hour.

From the 1st April the Nadur substation started its records. The highest temperature registered has been that of 99° F on the 23rd April, the lowest 38° F on the 1st April.

The highest black bulb reading was on the 21st August with a temperature of 159° F.

The site and exposure of the instruments are conventional.

No changes have been made.
